

STEEL TOOLZ LTD NZ

EASY WOOD TOOLS

The beauty of these revolutionary new turning tools is not really the hefty, 15" brightly finished maple handles, but the uniquely designed carbide cutters. Say goodbye to sharpening as these cutters, which add up to 20 additional hours of turning from each of the four-sides, are replaceable once dulled. Secondly, the cutter's designed so that you don't have to "find the bevel" when turning. Simply advance the tool slowly into the work piece and begin cutting straight in, or sweep the cutter from left to right, or right to left.

The *Ci1 Easy Rougher* hogs material off effortlessly by transferring cutting pressure directly to the tool rest and comes with the standard R4, 4" radius cutter for roughing larger pieces. Optional cutters include an R2, 2" radius used for finishing inside bowls under 8" in diameter and a square head cutter for roughing and creating square inside corners. Images below

The *Ci0 & Ci3 Easy Finisher* features a round carbide cutter for inside work on smaller bowls, or for cutting coves on spindle work.

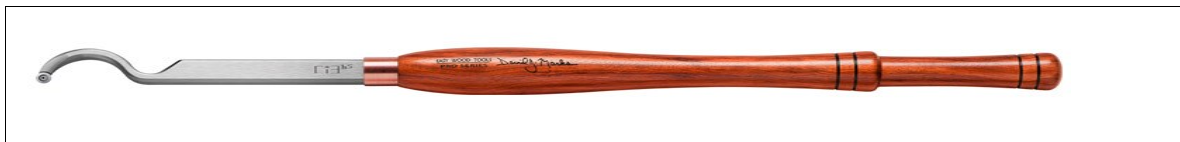

The *Ci2* is called a mini-rougher for a reason. It is a great roughing tool for small work, but is also capable of producing finish cuts.

The *Ci4 Easy Detailer* is paired with a diamond shaped cutter that can be used as a parting tool, as well as creating beads, coves, v-groves or a dovetail for chucking bowls.

The *David J. Marks Ci1 Rougher* is a limited edition tool, with an engraved signature endorsement from David Marks. It is equipped with a 20" Bubinga. Handle overall length 28 ½ "

Easy Wood Tool Mini's - These mini tools feature all of the same benefits and qualities as their full size parents. The cutter's are designed so that you do not have to "find the bevel" when turning. Simply advance the tool slowly into the work piece and begin cutting straight in, or sweep the cutter from left to right, or right to left. You will find these tools invaluable for those smaller more intricate turnings, such as pens, ornaments and smaller bowls, but they are ideal for roughing, finishing and detail work.

The *Ci3 Easy Hollower #5* is used to hollow vessels up to 5 inches in diameter, incorporates all of the same Easy Wood tool technology and benefits that you've grown to love. Using the same cutter as the *Ci3 Mid* and *Mini-size* there is no need to ever sharpen this tool, once dulled simply replace the cutter. Incorporating a 1" wide platform into the tool combined with the use of a "Super Wide" flat tool bar allows a natural presentation of the cutter, at the perfect cutting angle. This makes the normally tedious or difficult to make "blind cut" on inside of a hollow form something that even a novice can perform. Blade width 1", blade length 9 ½ ", handle length 16", overall length 25 ½ ".

Pro Easy Hollower #3 EWT3503

Easy finisher 16" handle, Ci0 tip
EWT #4200

Ci5 Replacement Cutter with Screw
EWT #

Lexan Chip Deflector for 3/8" Tool shaft
EWT #2700

Ci1 Lexan Chip Deflector for 1/2" shaft
EWT #1700

There is no substitution for proper eye protection, so we recommend the Lexan® Chip Deflector which attaches to the shaft of the tool and helps deflect the massive amounts of material these tools remove.

One tool - three cutter choices

Square
Item 1500

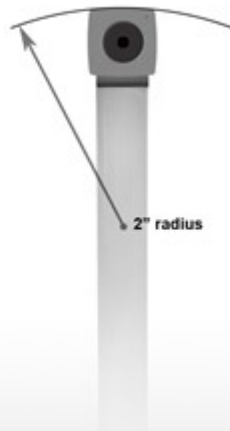

Used for roughing and when you need a dead square inside corner.

Slight curve
Item 1400

This is the standard cutter supplied on all Ci1 tools and is used for roughing and inside work on larger bowls.

Most curve
Item 1600

Used for finishing and inside bowls. Especially bowls under 8" diameter. Also great for pen making.
*We recommend this cutter for just the last few passes.
